info on HIV and sexually
transmitted diseases

How can I get infected with HIV?

These situations pose no risk:

Which doctor can help me?

„I don't know what's wrong with my body“	general physician
„I have skin problems“; „my penis/my vulva itches or has a rash with blisters“	dermatologist
„I feel pain in my abdomen or when menstruating“; „I have questions about my period, contraception and pregnancy“	gynaecologist
„My penis hurts or has infectious discharge“; „I have questions about the penis, contraception“	urologist
„I am scared, feel petrified or I am very sad“	therapist/psychologist

Are you infected with a sexually transmitted disease (STD)?

Do you feel itching, burning, pain or do you have infectious discharge? Then please consult a doctor.

And don't forget: a lot of STDs show no symptoms. Only a test can clarify if you are healthy.

How can I protect myself against HIV and STDs?

Use during sex

and a dental dam when practicing oral sex.
